

COMPANY INFORMATION

Hydraloop Systems is committed to empower people to save water & energy by offering smart and affordable water recycling products that contribute towards the UN SDG nr 6: 'water & sanitation for all'. Decentralised water recycling is the most effective and economical way to reduce mains water consumption without loss of comfort or personal hygiene. Recycling gives us our most precious resource - our 'blue gold' - a second life by using it twice in our homes!

The Hydraloop is an (international) award-winning, game changing, world product; a new generation water recycling systems that uses patented and groundbreaking technology and is the first to come to the market with a small-scale water recycling system for the consumer. It recycles 85% of all domestic water; it cleans and disinfects shower, bath and washing machine water so it can be reused for flushing toilets, washing machine, garden or swimming pool. The system is compact in size, has low maintenance, with 24/7 performance monitoring, self-cleaning, fully automatic and comes with a smartphone app. It distinguishes itself by being a design consumer product with easy installation (similar to a washing machine). The Hydraloop is a 'fit & forget' solution and:

- Reduces water consumption by 45%.
- Reduces sewage emission by 45%
- Reduces carbon footprint by >6%
- Reduces energy consumption by 600kWh* (in countries with cooler winters/*o.b.o. a 4-person family)
- Reduces water and energy costs

Hydraloop is a patented system, a trademark and it is certified for its water quality.

Hydraloop features in the new documentary '**Brave Blue World**' with a.o. Matt Damon, which will premiere in Nov/Dec 2019 in the US and Europe and shows Hydraloop to be one of the most high-tech revolutionary solutions for consumers to save water at home. (<https://www.braveblue.world>)

The Swiss 'World Alliance for Efficient Solutions' - looking for 1,000 commercially viable solutions that contribute towards the UN SDGs - awarded Hydraloop the '**Efficient Solution**' quality label in February 2019. (<https://solarimpulse.com/world-alliance>)

Hydraloop Systems started in 2016 and is located on the Water Campus in Leeuwarden. It has a highly skilled and driven team of 10 dedicated professionals working for it. Production is fully outsourced to partner 'Technologies Added': a 'shared smart factory' in Emmen, the Netherlands. The Hydraloop systems have been successfully tested for many years in various countries in Europe, the Middle East and Southern Africa.

Hydraloop Systems is looking for investors, international distribution partners and joint ventures.
